

How to download ringtones to your mobile

1. The first step is to work out what type of ringtone file your phone supports. For example, an iPhone uses a M4R file whereas a Motorola A1000 phone needs a MP3 file. Check what phone you have and what type of file you need.
2. Now that you have worked out what type of file you need, go to the No Smokes website and look for the ringtone you want to download.
3. Select the format you need and then click 'Download'. Save the file to your computer.

How to add ringtones to your mobile phone

Bluetooth or USB

Connect the phone to your computer via Bluetooth or a USB cable. Once you have created a connection from your phone to your computer, use the software that came with your phone to add the ringtone to your phone. This will vary, depending on the type of phone you have.

iPhones

If you have an iPhone you will need to open the M4R file in iTunes and sync the phone to your computer. After you have done that, go into the Settings on your iPhone and choose the file in the Ringtones section.

Android phones

If you have an Android phone, click on the link below for instructions on how to add a ringtone to your phone.
